Invalid Ballot Checking

As: Election official I want: To detect all ballots with less than 60% of candidates ranked in an STV election So that: The system can correctly identify unwanted ballots
Acceptance Criteria: The system correctly detects all ballots with less than 60% of the candidates ranked at the beginning of the election. The system stores the ballots in a list.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Small

Invalid Ballot Removal

As: Election official I want: STV ballots with <60% of candidates ranked to be removed So that: The system is protected from ranking errors and bad data and the official does not have to account for these types of ballots.
Acceptance Criteria: The system ensures that the list of ballots with less than 60% of the candidates ranked is not considered during election execution.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Small

Invalid Ballot Count Adjustment

As: Election official I want: The STV election to adjust the total number of ballots following the removal of invalid ballots So that: The STV system correctly carries out the election using the correct Droop quota and the data of the election is not skewed.
Acceptance Criteria: The ballot count stored in the active election is adjusted to reflect the total ballot count following the removal of ballots.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Small

Invalid Ballot Removal Report Specification

As: Election official I want: STV ballots with <60% of candidates ranked to be removed. The user should then be able to decide the name of the report file and its location. So that: The user gets to decide the report's name and location.
Acceptance Criteria: The report of removed ballots is named and located according to the user's input. Any created report is named correctly and found in the correct directory.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Medium

CSV Seat #/Election Type Args

As: Election official I want to pass the election type and seat number in the ballots CSV rather than through the UI. So that the system is more streamlined and automated, and I do not have to type these values in.
Acceptance Criteria: The ballots CSV now takes in a format with the first row containing the election type, the second row containing the number of seats, and the standard ballot data in the rows below. The election UI is adjusted to no longer ask for the election type and seats. The election system runs the correct election with the correct number of seats after parsing the information.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Small

Functioning MV Elections

As: Election official I want the election system to correctly execute MV elections. So that I can use the election system if I am running an MV election.
Acceptance Criteria: The ballots CSV function as described in *CSV Seat #/Election Type Args*. The election system supports the MV election. The election system uses a correct MV algorithm to run an MV election.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Large

MV Console Stats Report

As: Election official I want the election system to correctly output a simple summary to the UI following an MV election execution. So that I can quickly visualize the results, and the output works the same as the other election types.
Acceptance Criteria: The election system prints out a simple summary to the UI after the election finishes. The summary clearly states that it is for an MV election.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
Effort: Small

MV Report Outfile Creation

As: Election official I want the election system to create a file holding the results of an MV election after its execution. So that I can view the full results and export them if needed.
Acceptance Criteria: The system correctly creates a text file containing the full election results. The user can access the report. The user is informed of the file location and name in the UI.
Definition of Done: The system passes new unit and system test cases. The feature is implemented correctly according to the user request. The new feature can be displayed in a demo. The team approves of the feature.
